Pizza Sales Analysis

Using SQL

Hello Everyone

My name is Julia Emma, and I have developed a MySQL project in which I utilized MySQL Server Management Studio to analyze pizza sales data. This analysis is based on four datasets that provide valuable insights into various aspects of pizza sales performance. To uncover these insights, I addressed 13 key questions, which helped in understanding sales trends, customer behavior, and overall business performance.

All Questions

Basic:

Retrieve the total number of orders placed.

Calculate the total revenue generated from pizza sales.

Identify the highest-priced pizza.

Identify the most common pizza size ordered.

List the top 5 most ordered pizza types along with their quantities.

Intermediate:

Join the necessary tables to find the total quantity of each pizza category ordered.

Determine the distribution of orders by hour of the day.

Join relevant tables to find the category-wise distribution of pizzas.

Group the orders by date and calculate the average number of pizzas ordered per day.

Determine the top 3 most ordered pizza types based on revenue.

Advanced:

Calculate the percentage contribution of each pizza type to total revenue.

Analyze the cumulative revenue generated over time.

Determine the top 3 most ordered pizza types based on revenue for each pizza category.

Retrieve the total number of orders placed.

```sql
select count(order_id) as total_orders from orders;
```
